

Walk Through Tree Risk Assessment

“A Cost-efficient survey that only targets trees with elevated risk”

T1

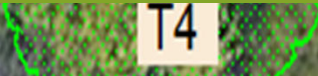

We are licenced and trained providers of a range of tree risk methodologies. These have different outputs depending upon your requirements and the scale of your site. We are happy to discuss these prior to undertaking the survey.

A Walk-Through Tree Risk Assessment is ideal for clients that have a large tree population to manage and only want to know about the trees on their land with elevated risk. Every tree will be inspected by our surveyors, but the report will only plot and record the trees with elevated risk. Less data collection, simpler documents and lower costs.

Top tip from our Surveyors:

“This is a great type of survey to full fill your duty of care under UK common law, it purely focuses on the risk trees and recommends how to control the risk ...simple and effective”
