

# BS5837 Arboricultural Method Statement (AMS)

## Tree Precautionary Zone - (TPZ)

*"The last step in land development around trees."*

## Construction Exclusion Zone

A BS5837 Arboricultural Method Statement (AMS) details the sequence of operations, tree protection methods and materials.

In addition, details of tree monitoring intervals and areas requiring specific monitoring can be highlighted. This helps ensure confident retention of trees as part of the planning process.

### Top tip from our Surveyors:

*"When a scheme is approved, sometimes a AMS can be requested, (occasionally before approval is granted) these can be complicated plans and documents, often we get asked to provide one without all the information – the more information we have in a timely manner less delays will occur"*
